

PaperTrace AR - tracking stickers

These tags anchor your reference image to the paper. Whenever the camera can see at least one tag, the overlay stays locked to the page - correct position, scale and perspective - even as you move the phone around with your hand.

HOW TO USE

1. Print this file at 100% scale. Plain paper works; sticker/label paper is nicer.
2. Cut along the dashed lines. Keep the white border - the tracker needs it.
3. Stick 3-6 tags around (or just outside) your drawing area. Any arrangement is fine; they do not need to be square, evenly spaced, or all the same size.
4. Open the app, allow camera access, and point the phone at the paper.
5. Sweep the phone slowly across all your tags once. The app learns where they sit relative to each other, so afterwards a single visible tag is enough to hold the overlay in place.
6. Pick an image, choose a trace style, drag/pinch it into position, then hit Lock and draw.

TIPS FOR STABLE TRACKING

- KEEP TWO TAGS IN VIEW whenever you can. This matters more than anything else here. Two tags pin the perspective down properly. With only one, the tilt of the page has to be inferred from four corners, and a fraction of a pixel of measurement error gets amplified the further you look from that tag - so the overlay wanders by a millimetre or two. It still works, it is just visibly less steady.
- Spread tags out around the drawing so your hand never covers all of them at once.
- Even, diffuse light. Avoid glare and hard shadows falling across a tag.
- Matte paper beats glossy. Glossy label stock reflects and blinds the tracker.
- Bigger tags track from further away. The 45 mm page is good for easels; 20 mm for A5 work.
- Keep tags flat. A curled tag bends the perspective estimate.
- If the overlay ever drifts, tap Reset anchors and sweep across the tags again.

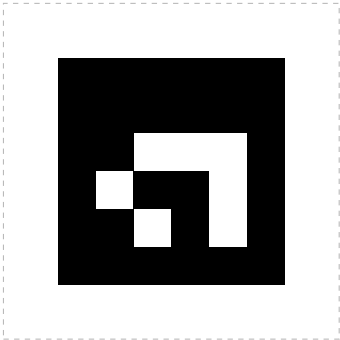

WHICH PAGE TO PRINT

- Page 2 - 30 mm tags: the all-round default for A4 / Letter drawings on a desk.
- Page 3 - 20 mm tags: small sketchbooks, close-up work.
- Page 4 - 45 mm tags: easels, large paper, or working from further back.

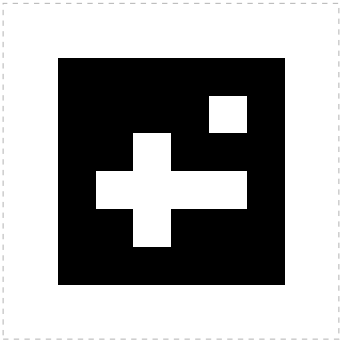

Each tag carries a different ID, so mixing sizes and pages on one setup is fine - just never put two copies of the same tag number in view at the same time.

PaperTrace AR - 30 mm tags - default

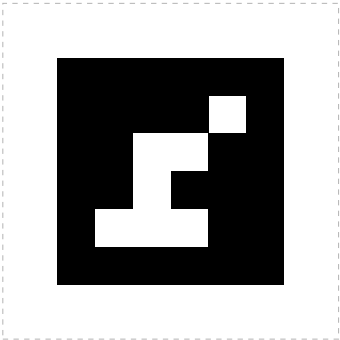

Print at 100% scale (no 'fit to page'). Cut on the dashed lines - the white border is required for tracking.
